EXPERIENCE

Technical Lead | Senior Full Stack Developer

 Jul 2020 - May 2024

Diagonal Technologies Pvt. Ltd. | Germany

Responsible for development of features and requests aligned with the goals defined by the Product Owners. As a Senior Full Stack Developer and Technical Lead, I am responsible for making technical decisions, designing system architectures for projects. I am also responsible for decision making of different technical difficulties in the organization and bridging the gap between technical team and management team for projects, including responsibility of managing technical resources and working close to the Project Manager and Product Owners. I am also responsible for converting requirements from feature definition onto technical requirements and helping the project manager define scope and priorities. Working with different AGILE technology and tools in parallel with hands-on development to maximize code efficiency and team management and maintaining quality of work are major parts of my responsibilities in the organization.

- Designed and implemented multi-language Micro Service architecture based Vehicle tracking Services.
- Implemented Event based Micro Service Architecture via the use of RabbitMQ provided services.
- Designed and developed nodejs bases communication and binary data decoding server service responsible for tracking vehicles devices provider Teltonika.
- Developed system to scan and report vulnerabilities for different platforms and CMS systems using a microservice architecture.
- Worked on vulnerability and update scanner and reporting system for different git based private repositories based on composer, nuget, docker, npm, drupal and other popular systems. - Worked on integration to project management tools like Gitlab, Jira, Redmine, Asana, Github, BitBucket and slack for vulnerabilities and update tracking tools.
- During this role i was given the task of making technical standards/practices and day to day organizational working manuals for increasing productivity and technical understanding throughout the organization and its members
